SUMMARY

Early-career Software Engineer with experience building backend and full-stack systems using TypeScript/JavaScript, Python, Java, C++, React, Next.js, Node.js, SQL, and AWS. Hands-on experience developing RESTful services, writing unit tests, participating in code reviews, debugging production issues, and improving CI/CD workflows in Linux-based environments. Strong foundation in object-oriented programming, asynchronous systems, cloud infrastructure, containers, and distributed systems, with graduate-level exposure to AI and machine learning tools.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL
Frameworks & Web: React, Next.js, Node.js, REST APIs
Cloud & Infrastructure: AWS (Lambda, EC2, S3, CDK, Cognito), Docker, Kubernetes (GKE), CI/CD, Linux
Databases & Data: PostgreSQL, MySQL, Kafka, Spark
Tools: Git, GitHub, debugging, code reviews, Agile, unit testing
Concepts: Object-oriented programming, asynchronous programming, distributed systems, cloud computing, authentication fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer Co-op, ***PavePal Electronics, Vancouver, Canada*** **Apr 2025 - Aug 2025**

- Built and maintained CI/CD pipelines to automate build, test, and deployment workflows, improving release efficiency and reliability.
- Developed and deployed backend services using AWS Lambda, EC2, and Cognito, supporting scalable and secure cloud infrastructure.
- Optimized application performance by ~25% through caching and lazy loading strategies, reducing latency for large datasets.
- Designed and improved internal engineering workflows, enhancing developer productivity and reducing manual processes.
- Implemented unit tests and participated in code reviews, improving code quality and reducing production issues.

Software Developer, ***PEBCO Electronics, Tehran, Iran*** **Sep 2021- Aug 2022**

- Developed C++ middleware for ATM systems to integrate client software with hardware devices, improving reliability of real-time transactions.
- Implemented multithreaded socket communication between ATMs and central servers, reducing end-to-end latency by ~15% under peak load.
- Prepared comprehensive unit tests and documentation to improve code quality and maintainability, resulting in **~23% cost savings.**
- Applied software development methodology to deliver under deadlines.

Software Developer Intern, ***PEBCO Electronic, Tehran, Iran*** **Jun 2021 - Aug 2021**

- Built internal ATM testing and monitoring utilities for backend components, improving error visibility and debugging speed for the engineering team.
- Enhanced real-time error logging mechanisms to detect and resolve failures faster, demonstrating strong analytical problem-solving.

EDUCATION

Master of Science in Big Data, ***Simon Fraser University, Burnaby, Canada*** **Sep 2024 - Dec 2025**

- Relevant coursework: Distributed and Cloud Systems, Machine Learning, Natural Language Processing, Big Data Lab

Bachelor of Computer Engineering, ***University of Tehran, Kish, Iran*** **Sep 2020 - Jun 2024**

- Relevant coursework: Data Structures, Object Oriented Programming, Computer Networks, Operating Systems, Databases
- Ranked 1st in the program for four consecutive years

PROJECTS

BC Car Crash Predictor (Award-Winning), ***Big Data II, SFU*** **Jan 2025 - Apr 2025**

- Built a real-time data pipeline using Kafka, Spark, and AWS, enabling streaming ingestion and processing.
- Designed scalable cloud-native ETL workflows, supporting distributed data processing.
- Achieved 86% prediction accuracy, winning the SFU Innovation Prize (2025).

Trivia QA System over Public Domain Literature, ***Natural Language Processing, SFU*** **Sep 2025 - Dec 2025**

- Built a retrieval-augmented system, integrating ML pipelines and automated evaluation workflows.
- Designed evaluation and experimentation pipelines, aligning with data-driven development practices.
